

## **AMENDMENTS TO THE SPECIFICATION**

Please replace Paragraph [0046] with the following paragraph rewritten in amendment format:

**[0046]** The holding tank 54 has a generally overall rectangular shape with a top wall 110, a sidewall 112, and a bottom wall 114. The top wall 110 contains a central dome which has a circular opening 116 (see Figure 11) which is opened and closed by a valve blade ~~416~~ 118 within the tank 54. When the tank 54 is stowed within the stowage compartment 58, the opening ~~418~~ 116 registers in a sealed manner with the outlet from bowl 72, and the blade 118 controls the passage from the bowl 72 into the holding tank 54. The holding tank opening 116 automatically connects to and disconnects from the toilet bowl outlet 72 in response to movement of the holding tank 54 into and out of the stowage compartment 58.
